Secure Mobility Readiness Assessment

Did you know?

- **82%** of workers use smartphones and tablets for business?

- Over **40%** of these devices are privately owned?

- More than **33%** of workers use technology in unauthorized ways?

- Tablets can require **4x more** Wi-Fi resources than laptop PCs?

Is your network ready for the mobile revolution ?

With more than 80% of workers conducting business on mobile devices, including corporate-owned and "bring your own device" (BYOD), the need for extensive wireless / WiFi support has never been greater.

The SPS Secure Mobility Readiness Assessment is designed to help you answer this question, providing specific recommendations to ensure that your wired and wireless infrastructure will meet current and future mobility demands.

SPS | STRATEGIC PRODUCTS AND SERVICES

High-Performance Mobility

Mobility communication is all about making employees more productive.

Mobile workers require a high-performing corporate wireless network. Real-time voice applications introduce even higher requirements for ease of access and reliable quality of service (QoS). And because the mobile revolution is still developing, your mobility and BYOD plan must be updated to align with changing business needs and security requirements.

SPS mobile solution experts can assess your company's current wireless environment, and identify specific recommendations to help you realize the business benefits of a highly available and secure WiFi network.

The assessment will address the interrelated factors that must be considered in any corporate Mobility / BYOD strategy.

- *Identify mobile devices to be supported (smartphones, tablets, laptops, etc.)*
- *Define end-user profiles with specific mobility requirements*
- *Assess requirements for mobility-enabled corporate applications*
- *Determine network impact of wired, WiFi, and cellular usage*

Your Secure Mobility Readiness Assessment will include recommendations based on industry best practices, including:

- *Optimize productivity by ensuring high-quality WiFi access for business, personal, and guest devices*
- *Guarding against misuse of corporate data, applications, and network capability*
- *Planning for continued growth in user demand for mobile devices and applications*

Our goal is to optimize employee productivity and ensure efficiency in the design of your WiFi network. The information you gain will allow you to ensure that your WiFi investments are scaled correctly to improve usability and deliver business results.

Partner with SPS for Secure Mobility Readiness

SPS is an expert provider of converged communication technology, offering a full range design and support services for IP telephony, data infrastructure, and wireless solutions. With our manufacturer-agnostic approach, SPS engineers can develop and implement a versatile and secure mobility solution that is flexible enough to grow with your needs.
