

SIMPLE, SECURE, RAPID DEPLOYMENT FOR SPS iCON MONITORING AND MANAGEMENT

iCON Manager enables rapid provisioning and management of iCON monitoring tools and services. This integrated solution provides the highest available level of security while ensuring optimal performance, agile deployment and simple management.

Benefits:

- / Simplify and accelerate iCON deployment.
- / Protect system health and performance data.
- / Secure data transport.
- / Enable rapid access for service engineers.
- / Facilitate effective management.

To deploy, SPS provides a cloud-connected, virtualized server appliance, pre-configured with iCON Monitoring and Management software and hardened firewall capabilities.

iCON Manager is the most secure way to deploy SPS iCON Monitoring and Management services.

FULLY INTEGRATED HARDWARE AND SOFTWARE

Simplify and accelerate iCON deployment! iCON Manager provides everything needed to deploy in a single virtualized appliance. It arrives pre-assembled, fully configured and customized to the client's monitored network. This cuts implementation time and required resources, minimizing the need for coordination among the network, application, security and data-center teams.

HARDENED VIRTUAL ADAPTIVE SECURITY APPLIANCE

Protect service and performance data! iCON Manager provides the highest level of security with a hardened, virtualized firewall that supports site-to-site VPN connectivity with the SPS Service Cloud.

- / Provides application-layer and network-layer security with the latest IPSEC IKEv2 protocols and AES256 encryption.
- / Applies a "default deny" policy, restricting access to essential TCP/ UDP ports only.
- / Complete transparency of firewall configuration and logs allows the client's IT team to monitor iCON Manager network traffic.
- / Provides SPS engineers with secure remote access when needed, using SPS-provided secure hardware and multi-factor authentication.
- / Built-in network translation avoids IP address conflicts and overlap.
- / Periodic security updates and patches ensure ongoing optimization.

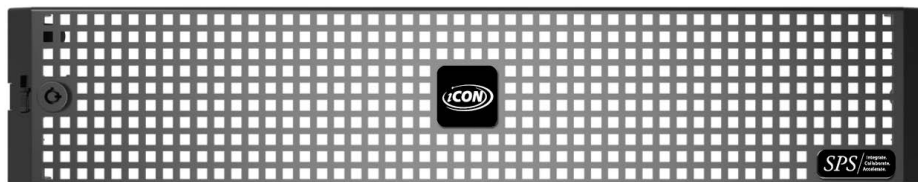

CLOUD CONNECTION WITH SPS TECHNICAL SERVICES CENTER

iCON Manager provides a highly-secure link between monitored devices and the SPS Technical Services Center (TSC). This linkage provides several key benefits:

- / Secure transport of health and performance data to SPS engineers
- / Rapid response to mission-critical product and service alarms
- / Immediate access by SPS engineers for troubleshooting and ongoing management

INCREASE AGILITY, OPTIMIZE TOTAL COST OF OWNERSHIP

The iCON Manager virtualized server platform enables SPS to deploy best-in-class monitoring and management tools rapidly across our client's entire UC, network, and data center ecosystem. Integrating multiple tool sets on a single platform reduces complexity. Hosting it within the SPS Technical Service Center provides a single point of contact for monitoring and management. Service from SPS simplifies requirements to maintain licenses and service contracts with multiple vendors.
